

Olympia High School Planned Construction Bond Investments Election Day: February 9, 2016

Olympia High School

Proposed Bond Investments:

- Renovate the North Street field with sod; install a synthetic turf field with natural in-fill, and low-level lighting and fencing on Henderson field. (\$2 million)
- Build a free-standing, two-story building of 22 classrooms. The building affords the ability to respond to enrollment growth and reduce reliance on portables. The building will likely include four new science labs, as the state has recently doubled the number of science lab credits required for graduation. The building will be placed behind the stadium and baseball fields.
- Replace HVAC furnaces, AC units and install new controls. (\$3 million)
- Refresh gym floor, walls; improve wall padding; update scoreboard and sound system.
- Repair multiple sidewalks, gas main protection, fencing and drain infrastructure.
- Repaint walls and replace rubber base (molding) in corridors. Repair the Commons concrete slab. Replace carpet throughout.
- Resurface tennis courts.

Newly authorized investments total about \$32 million.

Interior and exterior security cameras were installed in October 2016 and the installation of a new fire alarm system is currently in progress. Other recent investments included about \$863,000 to install safety sensors and wainscoting in the lecture halls, install a new gym roof, paint the exterior of the portables, relocate a compressor to a new shed, purchase and install a new generator to allow the school to be used as a designated Red Cross shelter, and purchase and install a greenhouse for the GRuB Program.
